

Cancer Science Conflict of Interest Policy

Updated on 1 April 2025

The Japanese Cancer Association (JCA) requires authors, editors and reviewers, to disclose any potential conflict of interest directly or indirectly related to articles submitted for publication in “*Cancer Science*”. A conflict of interest exists when anyone has financial or personal relationships that could inappropriately influence (bias) his or her actions. The intent of the JCA Conflict of Interest disclosure policy is to provide authors, editors, and readers with all the facts necessary to make informed judgments about the content of *Cancer Science*.

Authors will be required to complete a conflict of interest disclosure form as part of the initial manuscript submission process. The corresponding author is responsible for obtaining accurate information of conflict of interest forms from all authors of the manuscript. The disclosure of a potential conflict of interest does not necessarily affect the manuscript’s chances of acceptance. Disclosures will appear as “Disclosure Statement” in the published article. Disclosures that the author deems relevant will be disclosed publicly.

Serious failure by any author to disclose a conflict that later comes to light will result in a ban on the author publishing in *Cancer Science* for a maximum of 3 years.

Editors are required to fill out conflict of interest disclosure forms on an annual basis. Editors, Associate Editors and persons asked to peer review a manuscript, should voluntarily remove themselves from involvement in any manuscript review or discussion if they believe they could have a conflict of interest.
